Subject: Resin Source Change for Alpha Laboratories' Pastettes®

Dear Valued Customer:

At Alpha Laboratories we continually strive to optimise and improve our products to provide our customers with the best possible solutions. Periodically this involves a review of raw materials and their sourcing, to ensure continuity of supply. As a result, we are writing to inform you that we will be utilising a newly sourced Low Density Polyethylene resin for the manufacture of our Pastettes.

This new LDPE resin is a similar grade to that currently used and complies with the same regulatory requirements. A comprehensive verification has been completed to confirm all products meet our current specifications. This change will ensure our Pastettes continue to be manufactured to our high quality standards.

We expect to implement the change of low density polyethylene resin source during the second quarter of 2018. Stringent source management will be implemented to maintain tight control and traceability. All other materials used in the manufacture of the products will remain the same; therefore, this change is not expected to affect the form, fit or function of our finished products.

The following supporting documents are available via the links below:

- Validation summary for Alpha Laboratories' Pastettes
- New LDPE resin safety data sheet
- New LDPE resin technical data sheet.

If you require additional information in relation to this notification, please contact us. Thank you for your continued support of Alpha Laboratories' Pastettes.

Yours Sincerely,

Sue Fletcher
Principal Product Manager, Laboratory Products
